DO YOU KNOW WHEN MOTION HAS STOPPED ?

When a conveyor jam occurs you may not always know about it, which can cause damage to products and equipment.

The innovative and compact motion sensor by di-soric delivers complete visibility of materials moving at speeds up to 1m per second.

You can also combine the optical motion sensor with a standard rotary or incremental encoder to precisely detect any slip, before it's too late.

FEATURES:

- Designed to monitor material flow, wire feeding and other applications
- Detection of metallic, non-metallic and a variety of other materials
- Robust metal casing and IP67 protection (NEMA 6)
- Fully adjustable and German Engineered

APPLICATION SUCCESS:

"I have been an instrumentation/control technician for 25 years. I had a hard time finding a motion sensor that would work on our box lines in an industrial atmosphere. I finely located one through TR Electronic. It works very well. I just want to thank TR for their help."

- World-Class Manufacturer of Children's Products

ABOUT **TR ELECTRONIC**

For over 20 years TR Electronic North America has been providing solutions for a wide variety of industries. TR Electronic is committed to providing the best possible service and support to its customers. Therefore, to always ensure you have the help when you need it, TR Electronic offers a complimentary online support center, 24/7 technical support, installation and commissioning assistance, network/bus analysis and technical services training.
